Tabli is a tab manager that can be easily installed in your browser and offers plenty of neat features for helping you to manage all the resources you have opened in Chrome. Its core functionality is to organize in a popup window all your open tabs and windows. Keep your workflow clean and tasks organized In a modern age bombarded by information and news, with heavy workloads and tons of resources to check, we all finish the day with a bunch of tabs and windows open, many of them still have to be researched, checked, read. The Tabli extension can be the solution to your problems. It is installed immediately and with a simple click, every window and tab you have open in Chrome will be organized in a list, with a searchable, scrollable view. As a better alternative, you can maximize and transform Tabli from an extension tab into an actual window available in your computer's taskbar. Use these features to stay congruent with your priorities Tabli offers good feedback and displays the number of active open tabs, windows, and the number of saved ones. This way, you will always have control over your remaining tasks. Each browser window becomes a list in your Tabli organizer. Name these lists as you like, adjust their theme, font size, and layout. Even if you forget to handle all the resources you have open in your browser, Tabli will keep the addresses stored so you can have them available after restarting the computer. Users have the option of showing the Tabli window at startup. That way, you will never forget about your tasks again. Conclusion Tabli is an efficient solution for those who have a lot of resources that need to be
