
Windows Whistler Build 2296 Download [BETTER]

Jan 22, 2022 - Windows XP build 2296 is the official Beta 1 build of Windows XP, which was released to testers in multiple languages on October 31, 2000. The build includes all important updates released as of January 17, 2003. This is the first version released for testing, but it also contains patches released after SP2 was released. Unlike SP3 and SP4, which were released in mid-November, SP1 was not released until January 2001 because Microsoft changed its certification procedure. The beta also included patch KB890830, which was supposed to be fixed in SP2. Despite this, these patches were not included in SP2.
