What's New In?

This is a simple Widget that allows you to read the system volume from your desktop. I used this when the taskbar volume control doesn't work in XP, because of the way it's coded. It looks somewhat similar to the Vista/7/2008/2010 one, but is different in a lot of ways. ⬚ Installation: ⬚ Use the Widget Installer at to install it. Usage: 1. The volume level shown by the widget is the system volume, NOT the system level. 2. The widget isn't meant for usage from the desktop. You can use it from the desktop only if you use a virtual machine like VMware, VirtualBox or Virtual PC. 3. If you click on the widget it will toggle the desktop volume (from 0 to 10). 4. If you click on the widget again it will reset the desktop volume (from 10 to 0). Features: ⬚ Reads the system volume from your desktop and shows it. ⬚ Allows you to change the volume using the keyboard shortcuts <C> / <S> / <V> / <X> / <M> / <K> / <F> / <T> / <U> / <B> / <W> / <A> Code is from the Volume XP Widget. Support is on but only in Czech. Requirements: ⬚ Yahoo! Widget Engine This is a simple Widget that allows you to read the system volume from your desktop.
