Dotaku's tone generator is a comprehensive software for sound synthesis. It offers you a broad spectrum of functions for sound generation, including synthesis, waveform generation, noise, ring modulation, frequency modulation, effects and modulation. You can record the result as a WAV or MP3 file. This application also includes two professional drum samplers (Drum Sampler 1 and Drum Sampler 2). All Drum Samplers are provided with a number of advanced features, such as drums mixing, pitch detection, etc. Drum Samplers come with six drum kits which are specifically sampled from the world-famous Roland TD-10 drum machine. Drum Samplers support different drum recording modes, including time shifting, perfect timing and pitch shifting. Recording is based on dynamic drum pads, which can be recorded in both direct and drum sampler modes. Drum Sampler 1 also supports the familiar 16-track sequencer. Dotaku is also able to generate rich ambience sounds using its sophisticated noise engine. By manipulating the noise parameters, you can easily create a variety of ambient sounds for creating a perfect electronic music mix. Furthermore, Dotaku supports a number of effects, which enhance sound quality. You can customize the effect parameters, with the resulting effect being saved in the effected file. For example, you can apply reverb, wah-wah, chorus, phaser, re-guitar, delay and others. Dotaku can generate analog and digital waveforms. Analog waveforms are created by applying a simple waveform generator, and the number of waveform types is virtually limitless. Each analog waveform can be recorded as a WAV or MP3 file, with WAV files having a sample rate up to 48 kHz. Digital waveforms are created using Wavegen II, which is a built-in Digital Waveform Generator. It is based on four waveform modes. The output waveforms are 24bit, 44.1 kHz. The Wavegen II is also provided with analog phasing capabilities, as well as a VCA-like effect which is a bit of a shame that is completely non-adjustable. You can edit recorded waveforms in waveform editor, pitch shifting, adding effects, channel settings. Manages: Dotaku can record internal samples in WAV and MP3 formats. It also supports 8 and 16 bit sample rates for WAV files and up to 48 kHz for MP3 files. It has several distinct features, such as an extensive waveform generator, a built-in digital waveform generator, its own synth engine, and various effects, including reverb, wah-wah, chorus, re-guitar, delay, reverb and noise. Dotaku's built-in drum sampler supports time shifting, perfect timing and pitch shifting. It also includes a 16-track sequencer, with a full feature set and the ability
