We've had a few Google Summer of Code students working on DAWD, and today we're finally ready to show off their work. It's a simple interface for real-time image processing: the user first provides a [Java] image, which is segmented into regions and the region of interest (ROI) highlighted, then the program generates a [Scala] data structure of ROI areas with corresponding processing times and corner coordinates. Each [Scala] item can be represented by a dot in the image, and by touching the dot, the user can toggle the corresponding ROI's processing time. While the tool is designed for processing videos, it could also be used for any other images. We'll start with a visual representation of the user interface: Here we see three dots on the left, corresponding to the ROIs to be inspected. The user can touch any one of them to get details about it. This is the same interface for different numbers of regions, though the number of dots and correspondingly the number of

[Scala] items presented on the right will vary. To start the analysis, a region will be highlighted: Then, the user can set a timer and click "Start", the processing will start immediately: Now, if the user clicks on a dot, the processing time and position of that ROI is displayed: Moving along to the next dot, if it's within the ROI boundaries, the processing time will be displayed again: You can use the space bar to move the cursor around the image: And if a ROI is in the middle of an ROI boundary, then the processing time and position of the a1d647c40b

I hope this will help you As a huge fan of the DC Universe on the big screen, I've always been hoping the studio would translate their "remakes and reboots" into a separate universe from the film universe as a way to make things more interesting. I know how far away the DC Universe is from the DC Comics Universe and DC Films. Not to mention the continuity issues that seem to be cropping up. So, I am a huge fan of the "translated" Batman show that is coming up on Amazon Prime, starring Ben Affleck and a fantastic cast. I am beyond excited for this show and I love what they are doing with it. This morning, I was at the grocery store and noticed something interesting, namely the DC Universe package included a coupon for $1 off of the DC Films app, which is the app I use to access the world of DC Comics. I was curious to see if the app would even link to the upcoming "Batman" TV show as they are doing that with the Batman and Harley Quinn comics, so I decided to look it up to see how this would work. Here's what it said. "This offer is valid on the App Store for Apple, Google Play for Android and Amazon. Go to the App Store on your device or on the App Store app on your iPhone to download the DC Universe app for $1 off. That's $1 off the app, no need to purchase anything." Even though this is a promotional offer for the app, I was still curious to see what they would do with the app and it was simple. They linked the app to "Batman" TV show. I am not sure if this means the app will have access to it or if they just linked the app with it. But, as a fan of the DC Universe on the big screen, I am
