How to do Red Eye Removal in Adobe Photoshop Red Eye Removal is one of the most sought after post-processing tricks used by pros and amateur photographers alike to make their subjects look more natural. This is accomplished using a combination of Adobe Photoshop and some tools that can be purchased in a device called a red eye reduction attachment or red eye removing plug-in. The process involves creating a pair of red eyed images of a subject's eyes in different parts of the image (using the Retouch tool) and then using the Merge to HDR feature to merge the two retouched images into a single retouched image which produces a greatly improved photo. Here is a look at how you can get rid of red eyes in Photoshop. Learn how to do red eye removal in Photoshop. STEP 1. Open Photoshop Elements to a New Document Open a new Adobe Photoshop Elements image by clicking on the New Document button on the ribbon bar. STEP 2. Turn off the Device Preview Tool If you don't see any tools or icons on the toolbar when you open the image, make sure the Device Preview Toolbox option on the Basic panel of the preferences is unchecked. It can be found on the Windows-oriented tabs of the Preferences dialog box. STEP 3. Use the Retouch Tool to Select The Retouched Area Make sure the Retouch Toolbox button is enabled on the Basic panel of the preferences dialog. With the Retouch Tool, make a selection of the area where the red eye is to be removed. When the retouching tool is active, you can use the settings on the F-X tab (or the icon/button shown at the left of the screenshot to have the selection auto-update). Press the left mouse button to preview the selection. Use the slider next to the preview area to fine tune the selection based on your preferences. Use the right mouse button to complete the selection. For more help with the retouching tool, go here. STEP 4. Turn on the HDR Tool Once the selection is complete, you can proceed to the Merge to HDR feature. Make sure the HDR Toolbox button is enabled on the Basic panel of the preferences dialog. STEP 5. Merge Retouched and Original Images The Merge to HDR dialog box will appear. The box will be populated with the selection you just made. The Merge to HDR dialog box will ask you 05a79cecff

Influence of anti-cholinergic pharmacotherapy on lower esophageal sphincter tone. Lower esophageal sphincter (LES) basal pressure can be altered by anti-cholinergic pharmacotherapy. However, clinical data supporting this notion are sparse. In order to address this issue, we measured LES basal pressure in 22 patients with scleroderma (group A) and 12 patients with nonautoimmune esophageal disease (group B) and compared LES basal pressure measurements with and without anti-cholinergic pharmacotherapy. LES basal pressure was measured by endoscopy using a 200-ml water-perfused balloon catheter. LES basal pressure was not influenced by intravenous administration of atropine (0.05 mg/kg body weight). However, intravenous administration of atropine (0.025 mg/kg body weight) decreased LES basal pressure (mean +/- SE) in group A from 28 +/- 6 to 14 +/- 4 mm Hg (P Q: How do I get values from a QR code in Android Studio? I have an app that downloads a QR code from a URL and then parses the result. I need to be able to get the results of the image. I'm using a button to call the code so it's on the same activity.

Study of Genetic Resistance to Verticillium dahliae in Zantedeschia collina Link. cv. Rose Group of Southern Italy. A detailed study of genetic resistance to Verticillium dahliae in the new cultivar Rose Group was made. The results of the evaluation tests conducted from 2007 to 2009 demonstrated that the cultivar had a strong resistance level to this pathotype, with up to 99% of the tested plants resistant. The cultivar was also evaluated in a field trial. This trial confirmed high levels of resistance to Verticillium dahliae and represented an excellent beginning for the assessment of the resistance level to this fungal pathogen among zantedeschia cultivars in the central and southern regions of Italy, where the disease is widely present.There's a common complaint among gamers out there who spend hundreds of dollars on video games: The mandatory in-game purchases are getting out of hand. While many game companies are tweaking things to make sure their online budgets are fair — but high — for all players, we're worried that gamers' voices aren't being heard. Unwanted microtransactions are one of the most prevalent annoyances in games today. It's true for cash-strapped players who've been forced to drop thousands of dollars at once on a game only to discover they're playing a zero-sum game of online multiplayer battles. It's also true for the players who've had their loads of fun and been made to feel like second-class citizens because they've been forced to shell out more money in order to extend the life of an already profitable game. The most egregious examples are unending live online battles and in-game gold grinds, two of the most boring game elements now becoming a staple of online games. We've noticed that players' reactions to these pay-to-win features haven't changed much in three years. And that means it's time to take a serious look at whether there's a better way to monetize games. Let's make the case for more games without pay-to-win tactics. The right to pay Let's start with a few gaming basics. Make no mistake, many games have pay-to-win. I know that from my first game experience, where I was compelled to spend money
