
Steinberg Nuendo V4.3 Incl Expansion Kit DVDR-AiRISO Hit

Download

the main focus of the expansion kit dvdr-airiso is the addition of a new waveform type, the waveform, which is the new high-fidelity waveform type that nuendo v4.3 adds to its list of available waveform types. waveform is the highest fidelity waveform type. it's a 10 bit waveform with a 20 bit sampling rate. it's the newest waveform type, and it's a powerfull waveform type. it's the only waveform type that supports the following new features: chirp, pulse, and tremolo effects synth, chorus, and delay effects compressor, limiter, and equalizer effects delay effects the waveform type has a resolution of 30 bit, a sampling rate of 48 khz, and a sample rate that can be as low as 8 khz. this is a very good port of nuendo v4.3, the newest version of nuendo, which adds support for dvdr-airiso and microsoft wavepad and is the first release to include the expansion kit for nuendo v4.3. the expansion kit is now also available for nuendo v4.1 and v4.2

as a separate download, so if you are a windows user already running these versions of nuendo, you can use it, too. the work to port this kit to new versions of nuendo was done by daniel g. holzofling of the nugo.org website. nugo.org is a website that supports and encourages the development of all kinds of software for the apple macintosh platform.org is a group of independent programmers and software developers who help each other to create software for the macintosh. this is not a commercial project by any means, only a project of a group of friends, but a very good one.

Steinberg Nuendo V4.3 Incl Expansion Kit DVDR-AiRISO Hit

The Nuendo Expansion Kit delivers an expanded version of Nuendo 4.3 with: 26 instrument plug-ins modeled after instruments in the most popular A/D & D/A digi- classes (i.e. KORG, Renwood, Akai, M-Audio, Roland, MS-20, etc. 1605 drum kits (MIDI) for both live performance and studio applications A set of four preset effects and two plug-ins A midi adaptor for connecting to external hardware This set of plug-ins does not replace the standard Nuendo plug-ins, but is additional to them. They are also comprehensive and include many useful tools to aid the producer: Delay Modulator Phaser Distortion Echo Compressor EQ Broadcaster Gates/LFO Miscellaneous One of my favourite features of Steinberg AudioBox I/O software is the very handy metering grid that gives you a readout of the peak, peak and average, peak-based analyzer, band-based analyzer, and so on of all the signal tracks in your DAW. I havent seen anything like this in a free application, and having it automatically reset to a default state on start-up is a huge time saver. In Nuendo 4 we have an alternate metering grid that you can configure. Unfortunately, its not the same as the one in Steinberg AudioBox I/O, but its a

pretty good alternative. Its based on the Nuendo parameter browser and some clever trickery with the Meters view, and leaves its options quite easily accessible in the Meters view.

There are some elements (like repeat counter) that arent obvious, and its completely non-destructive, that is, you can mess around with the view and make changes and take a picture of the screen. If you can live without the numeric view, which you can access from the Meters view by clicking the num btn, then this is a pretty slick implementation. In fact, I think its better than the AudioBox I/O version.
