I have a list of films organized by the year they were released, I want to translate the year to the month then to the day. I have the list organized as such: 01.01.1953.The Sky Below.pdf 04.04.1974.SINSEIR.pdf When I was using a List, I set the format from "mm-dd" to "dd-mm" then in the conversion rule: "dd-mm". It worked pretty nice, however, I am now trying to convert the output from that List as a "Year". So, for example if my original list is: 01.01.1953.The Sky Below.pdf 04.04.1974.SINSEIR.pdf it will output: 01-01-1953.The Sky Below.pdf 04-04-1974.SINSEIR.pdf Then I create a new list with the output from the first one: 01-01-1953.The Sky Below.pdf 01-01-1953.The Sky Below.pdf 04-04-1974.SINSEIR.pdf 04-04-1974.SINSEIR.pdf I try to convert it back again: 01-01-1953.The Sky Below.pdf 01-01-1953.The Sky Below.pdf 04-04-1974.SINSEIR.pdf 04-04-1974.SINSEIR.pdf It is not. Any help? A: The reason this is not working is that you are trying to convert it back to a string (in the cell formatting, or in the data format) and in doing so, you are changing the original structure. You need to keep the number values if you want to convert it back into a date in this way. Change

---

the cell format of the column to Number and then set the Formatted Value to  $\$T\{year\}-\$T\{month\}$ . For example, this changes the cell format of the cell with 01-01-1953.The Sky Below.pdf to  $\$T\{year\}-\$T\{month\}$ , and the output will be 01-01-1953. The list should look like this: 01.01.1953.The Sky Below.pdf  
04.04.1974.SINSEIR.pdf These presentations were prepared
