Discovering Happiness by Dennis Wholey - The very best source for research paper writing services provided by qualified experts. Get free paper samples, research papers and other writing services. The present invention relates generally to the field of data processing. The invention more specifically relates to the field of managing enterprise data using a virtual machine. A virtual machine is a self-contained operating environment that software applications can run in. A virtual machine is created on a computing device that may be physically separate from the computing device on which the virtual machine is executing. Examples of virtual machines include a Java(trademark) Virtual Machine (JVM), a .NET(trademark) Virtual Machine (VMM), and a Xen Virtual Machine (XVM). A virtual machine can be created on a computing device as a platform for running other software. The virtual machine provides an environment in which software can run and in which software can make changes to a system without making changes to the system. For example, an application can create an environment in which the application can run its code without making changes to a computer system (e.g., a server) within which the application is executing. A virtual machine can be created to run an application on a physical computer system.-----Original Message----- From: Thompson, Virginia Sent: Thursday, May 24, 2001 3:45 PM To: Denne, Karen Cc: Steffes, James D. Subject: Legal Update on EES/EFS Hi Karen, If you could circulate this to EES and hopefully to the D.C. team it would be appreciated. I'm sending the attachment now. Thanks. Virginia Gérard de Lacépède Gérard or Gerard de Lacépède (1620–1687) was a French botanist, ornithologist and naturalist. He was the first scientist to describe a spiny-fruited tree in 1672, the breadfruit palm, and also to describe the butterfly *Hesperis* (1742), the dragonfly *Libellula* (1779) and the silkworm (1779). He is the great-grandfather of the German zoologist and entomologist Georges Cuvier. Personal life Gérard de
