Keyboard shortcuts are a series of key combinations that the user can issue at any time. They are used for productivity and ease-of-use. The most widely used shortcuts are listed here, but there are others. All keyboard shortcuts use the same keystrokes as the actual actions they represent. For example, the action is designated by pressing the ENTER key, and the keyboard shortcut is just a shortcut for that action. The terms you use to control your drawing are called commands, and they can be referred to in any number of ways. For example, you can refer to a command as a function, a subcommand, a selection, or even as a button. You can apply commands to objects in a variety of ways. Some commands are hard-coded or permanent in nature, while others can be deleted or overridden. Introduction AutoCAD is a native Windows application. They handle all of the 'back-end' business and most of the money goes to artists, so you are basically donating to your favorite artists! Your donation gets passed on to your favorite artists, who use your money to fund their art. Sometimes they use it to pay for travel expenses, which can then be donated to their studio/church/school, etc. I've been an artist for a long time and have taken advantage of this service for my art and for my soul. Much Love, Julia MayThyroid hormone-sensitive lipase activation in subcutaneous adipose tissue in nonthyroidal illness, independent of lean mass. The acute response of adipose tissue lipolysis to triiodothyronine (T(3)) administration was studied in humans in five nonthyroidal illness (NTI) patients (mean +/- SD body mass index [BMI] = 20.6 +/- 4.2 kg/m(2)) and five controls (mean BMI = 25.4 +/- 1.9 kg/m(2)) under conditions of energy equilibrium. The subjects participated in an inpatient study for 24 h (6 h in the fasted state and 18 h in the fed state). T(3) was administered at time 0 as a continuous intravenous infusion of 50 microg/h. T(3) was infused at the same rate in both groups, and serum T(3) levels were comparable between patients and controls (74 +/- 6 vs. 77 +/- 9 pmol/liter, NS). Triiodothyronine-sensitive lipase (T(3)-LIP) mRNA expression and protein activity were studied
