Although AutoCAD can be used as a 2D drafting and design application, most of its users are in the 3D design world. Designers can draw 2D views of their designs as the work progresses in order to ensure that the model is designed properly. The company's most popular and profitable product is AutoCAD, which is used to create drawings and 3D models. AutoCAD runs on Windows, macOS, and some Linux operating systems, although the company's Web site has made AutoCAD available for free to "everyone who needs it." AutoCAD is also available for mobile devices, including iOS, Android, and Windows Phone. AutoCAD's basic workflow is to create a model by drawing shapes and lines with a mouse, and then importing and rotating them with the keyboard. The resulting object can be viewed in different ways, such as by printing, drawing, or rotating. The 2010 version of AutoCAD was, according to computer magazines, the best product

Export through the collaboration and creation application, Autodesk DWG Exporter is one of the most powerful DWG conversion tools for the Microsoft Windows platform. The AutoCAD Map 3D is a version of the well-known AutoCAD 2D map component. It can be used to create and edit geographical and thematic maps, either in 2D or 3D mode. The scripting language for AutoCAD is AutoLISP. It is a programming language based on Lisp, the same language used for the Common Lisp programming language. Interoperability AutoCAD has the ability to read and display data from other CAD applications such as AutoCAD Map 3D, AutoCAD Plant 3D and GIS layers via XWf, XPlot, XPlot2 and ArcGIS's ArcSDK. As of AutoCAD 2016, several Interoperability capabilities have been added to allow XPlot and XPlot2 to run independently of AutoCAD and .NET. Project management AutoCAD supports project management for creating, viewing and reporting on project plans. A project plan is a collection of tasks which are planned, scheduled and budgeted. Project management is an essential part of AutoCAD and is available as part of the AutoCAD LT package. The project management tools include: Project Plan Wizard, a simplified wizard to create a project plan with predefined options Project Calendar, a calendar to display tasks which are linked to milestones Project Budget, an overview of the budget for the plan Project Scheduling (in AutoCAD LT only), a Gantt chart, allowing you to create a schedule Project Tracking (in AutoCAD LT only), a bar chart showing the completed tasks Project Dashboard, which includes graphs and reports of the plan's progress Project Schedule (in AutoCAD LT only), which allows creating a schedule based on the project plan and allows you to generate task lists The Share Plans capability allows a user to create a project plan and share it with one or more other users. The project plan can be sent as a file, to a sharepoint or FTP site or sent as an email. This is useful for team planning. AutoCAD has two versions of project management: AutoCAD LT (installed) is a free, basic version of AutoCAD. AutoCAD Business (installed) is a commercial version of AutoCAD for enterprise users. Microsoft Cuts Outlook.com's Free Service; \$10/Month Option Not Dead Yet Microsoft is ending free service of its online mail and calendaring tool, Outlook.com, next week, with a \$10-per-month, tiered option taking over its place. The company confirmed the change in an email sent to subscribers, citing the rise of the "mobile-first" online experience. "Starting May 11, 2013, Outlook.com will no longer offer a free, ad-supported version of the service, and you can no longer use the free version of Outlook.com with your existing Outlook.com email address," the company wrote. "The Outlook.com, plus service, will be offered on a monthly subscription basis at a monthly cost." The company first announced plans to eliminate the free version of Outlook.com in September 2012. A first try at a tiered pricing model, \$10/month, was suspended after consumers requested more options to choose from. In a blog post, Scott Guthrie, corporate vice president of Microsoft's on-premises and online services, said a tiered option is "the right choice for our users," adding that Outlook.com has been "growing and thriving" as the "mobile-first" service it is today. The move is a departure from prior years, when Microsoft offered two free online email services, Hotmail and Live, as well as one free personal Web hosting service, Live Mesh. The Web hosting service, Live Mesh, ceased operations in 2012. While in September 2012, Microsoft CEO Steve Ballmer heralded the company's strategy of "mobile-first, cloud-first," new Microsoft CEO Satya Nadella set more modest goals. "I think cloud is the new thing. And mobile-first is an evolution of it. And we're never done," Nadella said in November. In January, Nadella and Microsoft President Brad Smith spoke of a mobile-first computing
