Mutation of isoleucine-370 to alanine in the cystic fibrosis transmembrane conductance regulator impairs activation by cAMP. Cystic fibrosis transmembrane conductance regulator (CFTR) mutation has been recognized for its deleterious effect on cellular function of the cystic fibrosis (CF) airway epithelium. We have previously mapped this deleterious effect to the ability of the mutant protein (i.e., delta F508 CFTR) to catalyze ATP-dependent phosphorylation of Cl(-). The mutation, which truncates CFTR within the nucleotide binding domain 1 (NBD1), alters the activity of the protein from a functional protein (i.e., Cl(-) channel) to a kinase. However, the effect of delta F508 CFTR on Cl(-) channel function is not completely consistent with the activity of mutant CFTR as a kinase. We now report that mutation of isoleucine-370 to alanine alters the catalytic ability of delta F508 CFTR. Mutant delta I370/450CFTR is catalytically inactive, but only in the absence of cAMP. However, in the presence of cAMP, delta I370/450CFTR is partially catalytically active. Furthermore, in response to cAMP stimulation, delta I370/450CFTR and delta F508CFTR trafficked to the cell membrane in a similar fashion. The inability of delta I370/450CFTR to be activated by cAMP suggests a molecular mechanism by which delta F508 CFTR contributes to the CF phenotype.

Trump to leave room for military caravans of migrants - source Reuters HOYER: Hello, this is President Trump. This morning I said on Twitter that I am ordering Homeland Security to check, or as you would say, "double check," all entries into the U.S. from southern border. I am very concerned about what has been happening recently. You will recall that last year this very irresponsible body voted to make HUGE CUTS at our Southern Border. 80% of TOURS were for zero. No matter how much I DO, or DON'T, make cuts at Border, the Dem's will fight like CRAZY! Even Obama would not have put up w/their 1 for Zero claim. The Dems need to stop wasting ALL of OUR money. Vote R!!!!

Targeting the adipose tissue: What can be gained by inducing adipose tissue depots metabolic flexibility? Excessive adipose tissue (AT) accumulation is considered as a hallmark of obesity and abnormal AT function or recruitment underpins many of its associated co-morbidities including metabolic syndrome, type 2 diabetes and cardiovascular diseases. Indeed, increasing number of obesity-related morbidities have been linked to a skewed distribution of AT. "Skewed"

distribution of AT is associated with hypoxic and dysfunctional adipose tissue which is characterized
