## DriverAdvanJetzHotspotJr108

I have the sample code from the site, and it is the same as my own.

```
#include #include #include #include #include #include int main(int
argc, char *argv[]) { char *log_buf; int i = 1; tcsendbreak(2, TRUE);
log_buf = _tcsdup(TCHAR_TO_UTF8(argv[0])); _tcslwr(log_buf);
_tcsncat(log_buf, TCHAR_TO_UTF8(argv[1]), argc - 1); // make the
task to sleep for 5 sec. _tcsleep(5); tcsendbreak(2, FALSE); //
display the log string fprintf(stderr, "%s ", log_buf); _tcsfree(log_buf);
// kill the task tcsendbreak(1, TRUE); _tcskill(0); return 0; } I have
tried this code by replacing the signal handler with the below code,
but still the same result, missing the second command. HANDLE sig;
sig = CreateEvent(NULL, TRUE, FALSE, NULL); char *log_buf;
_tcsdup(argv[0]); _tcslwr(_tcsdup(argv[0]));
_tcsncat(_tcsdup(argv[0]), _tcsdup(argv[1]), argc - 1); // make the
task to sleep for 5 sec. c6a93da74d
