Adobe, one of the world's largest software companies, saw its fourth quarter results on Wednesday. After years of hype surrounding its line of creative software, Adobe's turn out to be a bit less impressive than expected, according to Reuters. Without offering much detail on a quarterly basis, Adobe dropped its forecast for 2017 sales by 10 to 20%. At \$3.6 billion, this represents a drop from \$4.4 billion in 2016, according to *Adobe Today*. Of course, this hardly comes as a surprise. The pro market has only recently begun to recover from the alleged discontinuation of Photoshop CS6. The company was active in the pro market for decades before CS6, however, and 2010 was its most profitable year ever. In the last two years, sales had been on the rise. While Adobe reported that it had been more profitable than in the 31 previous years combined, the company seemed to have lost interest in the pro market. A variety of reasons were given for this change-of-heart, but many of the reported reasons make little sense. Either way, it seems unlikely that Adobe's sales will grow as quickly as they once did. But that doesn't mean that the company's offerings have become completely outdated. Naturally, it's not a bad thing that Photoshop is very innovative. But even with a large team, this world-renowned software tool could benefit from some tweaks, optimizations and a better interface. Although bulk editing tools like Clone Stamp and healing tools are available, Photoshop has some other issues that I would have liked to have seen addressed. For example, the aforementioned Spot Removal tool is a great feature that works well for simple erases. However, those with a complex and more sophisticated set of healing to be applied might have to resize the image each time, which makes the process tedious and slow. And that is a bit more of an issue for landscape shots that otherwise would be perfect for the Spot Removal method. Another issue is that the B&W adjustment tool is currently lacking, because Photoshop has fewer B&W presets than the competition. And there is not even a Sepia adjustment if you prefer brown and gold tones.
