Finally, something I like to use everyday. With the release of Photoshop CS5 came the release of the Creative Suite for its fifth iteration, but its the first version to be accompanied by general availability and therefore adoption. In typical "beta" fashion, the general availability version incorporated only a subset of user submitted suggestions, tweaks and hacks. With version 5.0, the emphasis in the CS line has been around the workflow. There is a host of new functions and new tools in the latest version offering a ton of new features and functionality. They reinstated the popular "one click to deliver" preset delivery on the bottom toolbar for the first time in this new version, along with a host of other new touches. I have not yet used Batch Monitor, but will be adding this to my toolkit. I mentioned this in another comment on this review. I am eager to give this utility a try. This is an advanced tool well worth having in our arsenal. Lightroom is possibly one of the most innovative tools available, but once you arrive at a particular type of photo (landscape, macro, etc.), you can often perform a number of the same operations repeatedly, at the same pixel level. Because the touchscreen interface is well-designed and you don't need a stylus, you can do this, without needing to take your eyes off the very important viewfinder. This ease-of-use is part of Lightroom's great strength.
