One other thing I'll point out is that Photoshop doesn't use a true Windows file system anymore. What it does is it uses two different types of files. For camera RAW images, it uses a variant of Exif and XMP-Main. Exif is a standard format that stores information about the image for use by photo editing software like Photoshop and Lightroom. XMP stores data relating to Lightroom, while the actual picture data is held in the JPEG format. By default, this is the case and both files can be found in just about any photograph. The trouble with using two separate types of file and the resultant file clutter is that it creates problems with organizing and moving files. Photoshop used to be able to read the RAW file regardless of whether it was on a card or disk. That's no longer the case; the camera RAW files must be residing on a card in order for Photoshop to recognize them anymore. In other respects, Lightroom is just as much of a one-trick pony as it ever was. Lightroom can import your Adobe Camera Raw (ACR) images, but it doesn't really make any sense to use it as a standalone converter. You need a lot more than what Lightroom presents you in order to do anything in ACR. It's more of a collection organizer and a plugin for Photoshop. It has a nice list view of photos, but that's about it. It's received an update. Yet, one of the biggest additions in Lightroom 5 is the ability to view images directly in an Adobe Cloud account. In previous Lightroom versions, users had to go to their computer and then log into an Adobe account to access their photos. This removed a bit of the instant gratification of Lightroom, as the window to your files wasn't visible until you went to your computer. Now the window to the Adobe account is just a click away. Now from within Lightroom, download a selection or entire folder to your computer, and then either open it in the new Lightroom 5 window or you can open the window in Photoshop Elements 2021 by simply clicking on the Lightroom 5 icon. No more downloading files and then manually opening them in a different program. Of course, the files are still encrypted, but that's a small price to pay for this convenience.
